Cures (algae and Dr. Kelp) What is the dependent variable? Should slime and smell be Sponge Bob's conclusion? Although Gary's symptoms have disappeared, it is not known that this is what worked. You should redo the experiment and include a control group and two other test groups for each of the proposed treatments.3 – Where marshmallow muscles are you in the control group? SpongeBob What is the independent variable? Muscle cream What is the dependent variable? The amount of marshmallow raised (force) What should be Larry's conclusion? Since both Patrick and Spongebob improved their results by the end of Twoweeks, it doesn't seem that the claims for the special muscle cream are true. If the claims were correct, Wesho would have seen Patrick's amount double, but not SpongeBob's amount. The improvements were probably a result of Larry's Special Workout.4 – Microwave Miracle What was Patrick's hypothesis? He hypothesized that microwave fish food would make them smarter. Which fish are in the control group? The fish that eat normal food what is the independent variable? Microwave Foods What is the dependent variable? Time required to complete the Mazelook to the results in the charts. What should Patrick's conclusion be? According to the data, all but two fish, the anach group decreased their time through the maze. The special food doesn't seem to be a big factor that fish become smarter. Note: of the fish that improved their time, the fish that were fed by the special food were on average 9.625 seconds in their time compared to an average reduction of 6.625 seconds in the group of fish that received food in it. This shows a slight improvement for the microwave food group, Not enough to demonstrate that the hypothesis was correct. Further tests should be done to do KRAB breathing. Which people are part of the control group? The people who received their mint without the secret secret B) would be the control group.2. What is the independent variable? Secret ingredient in mint3. What is the dependent variable? Amount of breath odor (or bad breath) 4. What should Mr. Krabs' conclusion be? The breath mint with the secret ingredient seems to reduce the amount of breath odor more than half the time, but it is not 100% effective.5. Why do you think that 10 people in group B reported cooler breaths? This may be due to the placebo effect.Sponge Bob Clean Pants6. What was the problem? SpongeBob's pants were not clean.7. What is the independent variable? Laundry soap8. What is the dependent variable? Amount of dirt left on the pants (or how clean the pants were) 9. What should Sponge Bob's conclusion be? Clean-O laundry soap doesn't seem to be effective in cleaning your pants. What is the independent variable? Instrument11. What is the dependent variable? Number of jellyfish12. What should Squidward's conclusion be? The clarinet seemed to attract a large number of jellyfish, but the average number for the three rehearsals was also the average for the guitar. The flute has attracted the fewest number of jellyfish, but the average for this category is even higher than the control. Music seems to attract more jellyfish than when no music is played. Squidward's hypothesis that the clarinet attracts more jellyfish than other instruments is not supported by this experiment alone.13. Are the results reliable? Based on the limited amount of information provided, it is difficult to determine whether Squidward's results are reliable. The description did not indicate the duration of each interruption between tests. Have you had enough time for the jellyfish to "free" from the area? (NOTE: It accepts other potential flaws that students can support.) Super Bubbles14. What have the of super bubble? The announcements claimed that the super bubble solution would produce bubbles that were twice larger than those made with regular bubble soap.15.
